Economy of sale(s).

The economy

- Major U.S. equity market indexes moved higher during the week ending October 18. Investors' optimism regarding better-thanexpected retail sales and labor market data reignited hopes that the U.S. economy can achieve a soft landing.
- The Census Bureau reported that U.S. retail and food services sales—a gauge of consumer spending, which comprises more than two-thirds of the nation's gross domestic product (GDP)—increased 0.4% in September, exceeding expectations. Sales rose 1.7% over the previous 12-month period. Miscellaneous retailers, nonstore retailers, and food services and drinking places posted year-over-year sales gains of 7.9%, 7.1%, and 3.7%, respectively. In contrast, sales for gasoline stations tumbled 10.7% year-over-year as retail gasoline prices fell sharply over the period.
- According to the Department of Labor, initial unemployment insurance (UI) claims, a barometer of the health of the labor market, fell
 by 19,000 to 241,000 during the week ending October 12. However, the total represented a substantial increase from the 202,000
 claims filed during the same week in 2023. UI claims had spiked during the previous week as significant property damage from two
 hurricanes left some residents of North Carolina and Florida temporarily unable to work. The four-week moving average of initial
 claims rose 4,750 week-over-week to 236,250, and was up 15,750 from the four-week average of 210,500 a year earlier.
- The recent rise in interest rates has softened demand for mortgages. The Mortgage Bankers Association (MBA) announced that mortgage applications in the U.S. plummeted 17.0% during the week ending October 11, compared to the previous seven-day period. The MBA's Refinance Index fell 26.0% for the week, but surged 111.0% over the previous 12-month period. The Purchase Index was down 7.0% for the week, but increased 7.0% year-over-year. According to the Federal Home Loan Mortgage Corporation (Freddie Mac), the average interest rate on a 30-year fixed-rate mortgage rose 12 basis points to a two-month high of 6.44% during the week ending October 17—up from the two-year trough of 6.08% registered on September 26 of this year, but significantly lower than the peak of 7.79% reached on October 26, 2023.
- In other news concerning the U.S. housing market, the Census Bureau reported that new housing starts, a gauge of the health of the residential real estate market, declined 0.5% and 0.7% in September and year-over-year, respectively. The number of building permits, an indicator of new construction activity in the near term, decreased 2.9% in September and fell 5.7% over the previous 12-month period.
- The Fed's industrial-production (IP) index, which measures activity in manufacturing, mining, and electric and gas utilities, dipped 0.3% in September. Manufacturing activity was slowed by two short-term disruptions: a strike by a major labor union against passenger aircraft manufacturer Boeing Co., as well as the effects of the two hurricanes, which subtracted an aggregate of 0.6% from the index reading for the month. The IP index dipped 0.6% year-over-year due mainly to downturns in business equipment and mining.

Stocks

- Global equities were virtually flat during the week. Developed markets outperformed emerging markets.
- U.S. stocks ended the week in positive territory. Utilities and real estate were the top-performing sectors, while energy and health care were the main market laggards.
- Value stocks led growth, while small caps outperformed large caps.

Bonds

- The 10-year U.S. Treasury note yield dipped to 4.08% during the week.
- Global bond markets lost ground during the week.
- High-yield bonds led the markets, followed by corporate bonds and government bonds.
